DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it is longer than 150 words.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 5, 6, 8-10, 12, 14, 15, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Mourad *et al.* US 2002/0095087 A1. Mourad *et al.* shows all of the features of the instant invention including an indirect measurement system (ultrasonic ABP) that is corrected with a reference function and a map function fitted to a reference indirect measurement system (BP cuff) using a small number of polynomial parameters (abstract, paragraphs [0034]-[0036], [0065], [0080]-[0082], and [0150]-[0168]).

Allowable Subject Matter

4. Claims 19-43 are allowed.
5. Claims 4, 7, 11, 13, 16, and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter: in the claims as claimed, claims 19-43 require both indirect measurement systems to be penetrating

radiation imaging systems, claim 4 shows classifying the results, claims 7, 13, and 18 address updating the correction without updating the reference map, and claims 11 and 16 address re-obtaining measurement values and re-fitting the correction value. These features are neither shown nor fairly suggested in the prior art.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Heumann US 6,201,850 B1 appears to be related to the present invention.
